Drawing 1 - Fixture Assembly

1

1. Find a clear area in which you can work.
2. Unpack fixture and glass from carton.
3. Carefully review instructions prior to assembly.

***** The construction of this fixture will be accomplished by first attaching the mounting plate to the junction box, making all necessary electrical connections, mounting backplate to mounting plate, installing glass, and then attaching cage assembly.**

2

1. Remove main mounting plate (A) from fixture back plate (B) by removing the four flat head screws (C) - see **Drawing 1**.
2. Slide the wires from the junction box, through the large center hole, making sure curved slots (D) line up with the threaded holes in the junction box.
3. Using two 8-32 screws (E) attach the main mounting plate (A) to the junction box. A carpenter's level can be used on the folded side of mounting plate (A) to check for plumb.
4. Additional mounting holes (F) are provided on retainer plate and do to weight of fixture should be used. Use appropriate anchoring device for material to which fixture will be mounted.

Drawing 2 - Fixture Assembly

3

SAFETY WARNING: READ WIRING AND GROUNDING INSTRUCTIONS (I.S. 18) AND ANY ADDITIONAL DIRECTIONS. TURN POWER SUPPLY OFF DURING INSTALLATION. IF NEW WIRING IS REQUIRED, CONSULT A QUALIFIED ELECTRICIAN OR LOCAL AUTHORITIES FOR CODE REQUIREMENTS.

Make electrical connections from supply wire to fixture lead wires. Refer to instruction sheet (I.S. 18) and follow all instructions to make all necessary wiring connections. Then refer back to this sheet to continue installation of this fixture.

4

1. Mount the fixture by sliding the back plate (B) over mounting plate (A) - see **Drawing 1**.
2. Attach the back plate (B) to mounting plate (A) with screws (C) not provided.

5

1. Glass installation is accomplished by first placing glass (1) into square metal holder (G) attached to mounting plate assembly (2) - see **Drawing 2**.
2. Carefully lift glass (1) and mounting plate assembly (2) up and slip over socket assembly (3) and center stem (4). Hold in position against backplate (B).
3. Thread barrel knob (5) onto center stem (4) and tighten to secure mounting plate and glass to fixture.
4. Fixture can now be lamped accordingly. Bulb should not be touched with fingers, use of a rag or cloth is recommended.
5. To complete assembly, slip bulb shield (6) over bulb and finger tighten shield onto socket. Over tightening could make shield difficult to remove for relamping.

Drawing 3 - Post-Mount

wiring instructions

Indoor Fixtures

1. Connect positive supply wire **(A)** (typically black or the smooth, unmarked side of the two-conductor cord) to positive fixture lead **(B)** with appropriately sized twist on connector - see **Drawings 1 or 2**.
2. Connect negative supply wire **(C)** (typically white or the ribbed, marked side of the two-conductor cord) to negative fixture lead **(D)**.
3. Please refer to the **grounding instructions** below to complete all electrical connections.

Outdoor Fixtures

1. Connect positive supply wire **(A)** (typically black or the smooth unmarked side of the two-conductor cord) to positive fixture lead **(B)** with appropriately sized twist on connector - see **Drawings 2 or 3**.
2. Connect negative supply wire **(C)** (typically white or the ribbed, marked side of the two-conductor cord) to negative fixture lead **(D)**.
3. Cover open end of connectors with silicone sealant to form a watertight seal.
 - If installing a wall mount fixture, use caulk to seal gaps between the fixture mounting plate (backplate) and the wall. This will help prevent water from entering the outlet box. If the wall surface is lap siding, use caulk and a fixture mounting platform specially.
4. Please refer to the **grounding instructions** below to complete all electrical connections.

grounding instructions

Flush Mount Fixtures

For positive grounding in a 3-wire electrical system, fasten the fixture ground wire **(E)** (typically copper or green plastic coated) to the fixture mounting strap **(1)** with the ground screw **(2)** - see **Drawing 1**.

Note: On straps for screw supported fixtures, first install the two mounting screws in strap. Any remaining tapped hole may be used for the ground screw.

Chain Hung Fixtures

Loop fixture ground wire **(E)** (typically copper or green plastic coated) under the head of the ground screw **(2)** on fixture mounting strap **(1)** and connect to the loose end of the fixture ground wire directly to the ground wire of the building system with appropriately sized twist-on connectors - see **Drawing 2**.

Post-Mount Fixtures

Connect fixture ground wire **(E)** (typically copper or green plastic coated) to power supply ground with appropriately sized twist-on connector inside post. Cover open end of connector with silicone sealant to form a watertight seal - see **Drawing 3**.
